

Machines and Systems

Woodway can offer a wide range of packaging systems to suit all customers requirements when packaging items for both storage and distribution:

PAPERplus® from Storopack

Innovation that benefits you.

The 'Active' Crush Zone!

The crush zone consists of one or more layers of padding strips. In this way, the user can 'actively' influence the degree of protection based on individual shipping requirements.

The photograph on this page illustrates that a force striking a plane of glass will only deform the top padding strip. The second underlying layer is barely deformed at all and absorbs the energy of the strike. The third and fourth layers provide secure protection against shipping damage!

Flexibility

The padding strips are flexible and can be easily formed around edges and corners during packing. This increases safety and makes packaging easier. This flexibility means that the possible applications for this padding are unlimited.

Your Benefit

- Reduction in storage space costs
- 'Just-in-Time' availability
- Flexible/formable padding material
- Cut to any required length
- Environmentally friendly
- Adapted to your processes
- Easy to use
- No investment costs

Our Service to You

- A careful assessment of your requirements with your packing specialists.
- Integration of PAPERplus® into your packaging process.
- Automatic PAPERplus® dispenser tailored to fit your needs.
- On request, we can install an automatic PAPERplus® dispenser at your facility for evaluation
